When power is on, please do not operate it at the first three minutes for its initialization phase.

- 11 function keys: MODE, SET, UP ,C/F, DOWN, ZONE, ▼, HIS, MEM, CH, and SNOOZE/ LIGHT.
- Indoor temperature range: 0°C----50°C; Indoor humidity range: 20%-----99%
- Outdoor temperature range: -20°C----60°C; Outdoor humidity range: 20%-----99%
- Indoor/outdoor half round graph display shows the status of temperature/humidity measurement.
- Indoor/outdoor trend indication of temperature/humidity.
- Weather forecast: sunny, semi-sunny, cloudy, rainy, rainstorm.
- Air pressure record of last 12 hours.
- Max/min value record of indoor/outdoor temperature and humidity.
- Indoor comfort index: dry, comfort, wet
- Temperature display format selectable °C/°F.
- Single alarm

II. Start-up and reset

- When first start-up or reset, all of the icons and digits of the LCD will display for 3 seconds. It will then beep once and enter standard display mode. The clock will automatically detect the temperature and humidity afterwards for 3 minutes.

Remark:

Setting the air pressure:

When batteries are first fitted or renewed the air pressure is shown at sea level value. Input your current local Air pressure value (you may be able to get this from your local weather TV channel, broadcast or geographic Data). The weather icon will change accordingly to forecast the weather for the next six to twelve hours.

FCC warnings

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
